解：$P(predict) = P(predict|rain)\cdot P(rain) + P(predict|\neg rain)\cdot P(\neg rain)$

$= 0.9 \times 0.014 + 0.1 \times 0.986$

$= 0.1112.$

$P(rain \cdot predict) = P(predict|rain)\cdot P(rain)$

$= 0.9 \times 0.014$

$= 0.0126$

$P(rain|predict) = \frac{P(rain \cdot predict)}{P(predict)} = 0.1133$

$P(\neg rain|predict) = 0.8867.$
